Faculty Assigned Overall Grade (1-4) \_\_\_\_\_

- 1: FAIL – felt that everything was fine. Missed the diagnosis of chorio and inadequate contractions.
- 2: MARGINAL PASS – Recognized the abnormalities, but was uncertain how to proceed, or delayed treatment.
- 3: HIGH PASS – Correct diagnosis and Rx. Good documentation.
- 4: HONORS – Intern level evaluation and note with appropriate antibiotics and Pitocin dose.

Comments (Optional):

## Prenatal Visit

Marla Manikin is a 39 year old primigravida at 34 weeks gestational age. She's here for her routine OB visit. Her prenatal course has been uncomplicated:

- Gestational age confirmed by 1<sup>st</sup> Trimester ultrasound
- No significant medical or surgical history
- TWG 20 pounds to date. Today's weight is 165#.
- All labs have been normal, including 1<sup>st</sup> TM screening for Down's and NTDs.
- Her glucose screen was negative.

At her 32 week antepartum visit, her doctor thought she was measuring small, so she ordered an ultrasound scan.

Go in and introduce yourself to Marla, ask her any questions you want to ask, and examine her. Then discuss your findings and recommendations with her, if any. No charting is required.
